

Biostim Nitrifying Bacteria

Product Technical Data Sheet

Product Code: 22-KOIPONNITBAC-1

Uses and Applications

Small ponds can quickly turn yucky and covered in algae without proper love and attention – particularly if there are fish like Koi in the water who put a lot of waste back into the system. Biostim Nitrifying Bacteria contains a formulation of beneficial bacteria that eat away at the excess nutrients in the water and help to improve conditions for you and your fishy friends to enjoy.

This product works best when there is plenty of oxygen available in the water which can be made available by aerating the water.

Ingredients

These products contain high amounts of active nitrifying bacteria including Nitrosomonas, Nitrospira, Nitrobacter and heterotrophic Nitrifiers at the highest concentration in the industry. They also contain powerful micronutrients to boost the growth and reproduction of the nitrifying bacteria.

Store the product in the fridge to keep the bacteria asleep until you are ready to wake them up and get them to work.

Dose rate information

10ml per 1,000L of water

The above dose rate is a guideline only and may to be increased or decreased according to your individual conditions. It is recommended to treat, monitor and adjust your dose based on these results.

Apply the product regularly to achieve best results.
